

# CORROSIONX<sup>®</sup>

**STOP  
RUST  
NOW!**

rust which can then be removed with a plastic scouring pad. CX is actually better than rust removers which can be very harsh. If you use a rust remover, protect the surface afterwards with CX.

### Does CorrosionX leave a sticky residue?

Not sticky but slightly oily. The CX HD film is more like very light grease.

### Are there any harmful ingredients in CorrosionX?

CX is New Zealand MPI approved as Class C 11, same as Lanolin. Food safe, not food grade. Very low-toxic.

### When do I use CorrosionX versus CorrosionX Heavy Duty?

Use CX HD to protect from direct exposure to the elements, like salt spray, or occasional submersion. Use either CX or HD to stop electrolysis in engineering.

### Is CorrosionX good for use outdoors?

CX is great for outdoor applications also on electrics and electronics.

CX Heavy Duty will last longer on exposed items like iron pipes, leaf springs and containers doors.

### How does CorrosionX compare with wax coatings?

Wax CPC'S are designed to prevent rust/oxidation, not interrupt it. Actually, they can create problems by covering up the abuse, allowing it to grow underneath. CX is superfast to spray on, then penetrates i.e. into a hydraulic fitting and down an assembled bolt.

## CorrosionX is Simply Better

CX is a faster penetrant and offers a far better lubricant longevity in rust protection. It can be used to waterproof electronics and is fully sufficient at a 1 micron thick coating. 1 can goes a VERY long way. 1 litre coats 1000 sqft.

CX is non-flammable (though the propellant is in the aerosols). It is typically testing to 39,000 Volt dielectric strength, hence a leading compound to stop electrolysis and galvanic damage. CX will not harm rubber, neoprene, insulation, plastics or glass. It will protect and improve electrics or electronics exposed to the elements. It has unlimited shelf life and will not evaporate. Paraffin based.

### What is Polar Bonding?

This is an electrostatic attraction

to metal surfaces by some of the components found in CX.

### Can I use CorrosionX on circuit boards?

Circuit boards are a great place to apply CX. If they are corroded or have moisture causing problems, CX usually restores them. The same goes for com radios, VHF's, deck switches and trailer equipment.

### Can you paint over CorrosionX?

No, it must be removed which isn't easy because of polar bonding. Corrosion Xtreme Clean, Acetone, Wax and Grease remover or "steam jenny" (if a large area is involved) is required.

### Will CorrosionX remove rust?

CX is not a rust remover but it will facilitate its removal. CX softens
