

THE ULTIMATE PROTECTION FOR YOUR FLEET & PLANT MACHINERY

Safeguards electronics

Stops rust around windscreens

Protects engines, chassis, voids & all moving parts

Failing to properly maintain your fleet or plant machinery will dramatically reduce its lifespan. A fast and cost-effective coating of CorrosionX is a surefire way to protect your expensive equipment, whether stored inside or out, from corrosion and keep moving parts in mint condition.

Developed in collaboration with the US Navy and manufactured in Texas, our premium rust inhibitor and lubricant is the go-to solution for some of NZ and Australia's most well-known fleet companies and machinery owning businesses who want to maximise the lifespan of their equipment.

TWO KEY ELEMENTS SET CORROSIONX APART FROM ITS COMPETITORS:

- Revolutionary Polar Bonding™ technology bonds CorrosionX to metal surfaces like a magnet, driving out moisture and stopping rust in its tracks. Resistant to spray, wash-off, and heavy friction, it is very difficult to displace.
- The innovative, self-healing, Fluid Thin Film Coating (FTFC™) creates the famous CorrosionX creep, driving the product into the hardest to reach places and providing a massive 80m²/L of coverage offering incredible bang for your buck.

UNBEATABLE PROTECTIONS FOR CHASSIS, VOIDS, & ALL MOVING PARTS

The saying “*what you don't know doesn't hurt you*” definitely does not apply to the underside of your vehicle fleets and plant machinery. Unseen corrosion in the chassis and voids can be catastrophic.

Paraffin-based CorrosionX XD is our hero product for protecting vehicles from rust and corrosion. Trusted by titans like **Caterpillar** and **Liebherr**, **armed forces** around the world, as well as weekend warriors across the country.

CorrosionX XD penetrates existing rust and corrosion, displaces moisture, and prevents electrolysis. It leaves a non-hardening, self-healing coating for maximum protection against moisture intrusion while providing outstanding, long-lasting lubrication for all moving parts.

As a medium-build film, CorrosionX XD does not accumulate dust and dirt like grease does.

CorrosionX XD contains no wax, tar, or silicone and, unlike wax coatings, will not dry, harden, or crack under stress. It is safe on paint, glass, gelcoat, wiring insulation, most rubber, plastics, and electronics. Designed to withstand extreme corrosive environments, including sulphuric and direct saltwater spray.

CorrosionX is the only product readily available to the public that meets the U.S. Navy's tough corrosion prevention & control performance requirement MIL-PRF-81309H.

- Can be welded over without splattering.
- Safe on rubber, neoprene, glass, plexiglass, all plastics, all paints, cabling & monofilament.
- Lubrication value 0.4 (3 x higher than standard engine oil).
- Can be applied on wet & corroded surfaces.
- Safe to 39,000 volts (ideal for protecting or restoring electronics from moisture).
- Outstanding anti-seize.

Use XD inside voids & chassis, & on all moving parts
