

Ultrasonic Lubrication Checker - TLGU10

Designed for maintenance technicians, the TLGU10 uses ultrasonic technology to improve manual re-lubrication. When connected to a grease gun, the intuitive device helps a technician to dispense the correct amount of lubricant into a bearing.

The device is recommended for a range of bearing applications including electric motors, pumps, fans, compressors and conveyors.

In the following video you can watch product details, setup and how to use the Ultrasonic lubrication checker TLGU10.
